Real-Time Learning (RTL) COVID-19 global operation: How are National Society needs being addressed through the prioritization and allocation of funding to allow it to better rebound from the effects of COVID-19?
Acknowledgements

Appreciation first goes out to all the stakeholders interviewed across the five regions and Geneva. We realize that many of the stakeholders interviewed took valuable time from their busy schedules to respond to our questions.

This pilot Real-Time Learning for the COVID-19 global operation has been carried out by a global IFRC and National Society PMER team. Thank you goes to our PMER teams in Africa (Jackson Safari Kilonzo/Vincent Kiplagat/Khary Cisse/Seynabou Diop); Americas (Pradiip Alvarez/Marie Manrique/Wendy Arévalo/Ana Díaz/Andrés Gómez/Priscila González/María Larios/Melina Miele/Jeremy Smith/Araceli Sobenes/Wendy Soto); Asia Pacific (Audrey See Tho/Mursidi Unir/Tamar Gabay); Europe (Dorottya Patko/David Kohlmann/Francisco Fong, Daria Gordina); MENA (Nadine Haddad/Hamzeh Ababneh/Lina Harbieh/Dibakar Behera/Tendai Zauyamakando) and in Geneva (Miki Tsukamoto/Fred Fulton).

Disclaimer

The views and opinions expressed in this presentation are from our interviewed stakeholders, with analysis and interpretation carried out by the authors. It does not necessarily reflect the official policy or position of the IFRC secretariat.

Context

To help improve the efficiency and effectiveness of the IFRC secretariat response to COVID-19, PMER has been piloting an “active learning” approach to carry out real-time learning on targeted areas of the response. This approach is informed by the global scope, scale and rapidly changing nature of the COVID-19 pandemic and the response.

This second pilot aims to reach out to a wider range of stakeholders from Recipient National Societies, Donor National Societies and the IFRC secretariat, with questions identified by management/stakeholders at different points in the operation. This light and flexible approach substitutes the Real-Time Evaluation (RTE), which would be challenging to apply for this operation, but does not replace mid- or end point evaluations when the response is more stable.

Question 2 looked at “How are National Society needs being addressed through the prioritization and allocation of funding to allow it to better rebound from the effects of COVID-19?” This learning aims to complement the exercise Mobilize, Execute and Transform with Agility to Respond to COVID-19 which was carried out in April and it is hoped that the feedback will better help the IFRC secretariat adapt its operational response to better meet the needs of member National Societies worldwide.

Limitations

- Approval to launch the RTL Q2 came only in July which affected the data collection in view of summer holidays/Eid festivity worldwide, as well as competed with other initiatives which had already been planned for the months of July/August.
- Layers of communication needed to reach all relevant stakeholders, as well as the translation time needed for letters etc.
- Unforeseen time it took in certain regions for National Societies to select their representatives for the interview.
- Differences in time zones and internet connectivity in view of COVID-19 context posed a challenge in the RTL data collection and data analysis process.
- A representative sample of stakeholders were selected for this RTL based on recommendations from the Operational Management and a select agreed criteria developed by the global team. It was not possible to reach all stakeholders.

Methodology

Short interviews (via online platforms) were carried out with 95 key informants (IFRC, Recipient National Society, Donor National Society) from the five regions and Geneva. Interviews followed the same four group of questions and took approximately 20 to 40 minutes.

The methodology of data processing and analysis is a combination of Jess Letch’s ‘RapidCode’ system and the ‘thematic network analysis’ qualitative method. Thoughts and ideas (inputs) with more than 1,403 data provided by respondents were noted. Each input was matched to the relevant question.

As a first step, interviewers reviewed all inputs and based on content, identified the interview to the type of stakeholder (IFRC, secretariat Donor NS, Recipient NS) and assigned a high-level topic to each interview with a short summary of the interview.
Methodology-continued

As a second step, and in order to facilitate follow up on this RTL by Operations and to align with organizational thinking, many of the topics were then further aligned with the topics in the document Scaling and speeding our response (April 2020) by the analysts of the team. Topics were then collectively honed and placed on a list covering all responses.

Each analyst was assigned a question for which they reviewed inputs at times by topic/stakeholder/region and extracted key analysis points. Key points describing successes, challenges or recommendations by stakeholder was carried out for Q 3 and 4, with a deeper analysis by frequency and topic/response/stakeholder/region carried out for Q 2, 5 and 6. For Q1, a weighted analysis was used in determining the top 3 NS needs for the COVID-19 operation.

Analysing the dataset by the central topics provided the framework for identifying overarching issues and creating a thematic network of key subjects raised by respondents.
Key Question: Does the current funding prioritization and level of earmarking for the operation address National Society operational needs?

I. National Society Needs

Q1: What are the top 3 needs for National Societies during COVID-19?

Q2: Did the IFRC secretariat respond to these identified needs?

II. Prioritization and Earmarking of Funding

Q3: Do you have any feedback to share on the prioritization of funding for identified needs for COVID-19?

Q4: Do you have any feedback to share on the level of earmarking of funding for identified needs for COVID-19?

III. Factors to consider for Funding Allocation

Q5: What factors should be taken into account when considering COVID-19 funding allocation to National Societies?

IV. Recommendations

Q6. What recommendations on funding allocations would you like to give to the IFRC secretariat to better support COVID-19 needs?
Key Terms

DEMANDS AND EXPECTATIONS
Right balance on government, public and donors demands and the NSs absorption capacity to deliver with quality and accountability.

FLEXIBLE FUNDING
Decide with the NS on the activities that are more relevant to their COVID-19 response and ensure swift access to funds without compromising our collective accountability.

DO NO HARM
Ensure that all RCRC activities include a strong element on duty of care, operational analysis on the impact of our actions, “building back” better and support on the localization agenda. Ensure RCRC health actions to not cause physical or psychological harm to individuals or to communities served.

DOMESTIC RESPONSE
Ensure that NSs at Headquarters and Branch levels have the capacity to respond to the needs and address existing community services that can be quickly expanded and supported.

EVIDENCE-BASED AND RISK-INFORMED
Ensure funding is allocated towards activities likely to have the greatest impact on suppression of virus transmission, treatment of cases, and on mitigating the secondary health, social and economic impacts of the pandemic and efforts to contain it.

DEMANDS AND EXPECTATIONS
Right balance on government, public and donors demands and the NSs absorption capacity to deliver with quality and accountability.

FLEXIBLE FUNDING
Decide with the NS on the activities that are more relevant to their COVID-19 response and ensure swift access to funds without compromising our collective accountability.

FLEXIBLE REPORTING
Accepting to use NS standard reporting on their domestic response plan and financial reports to reduce reporting requirements, while increasing risk analysis/risk informed decisions.

NEEDS BASED
Ensure funding serves to address the direct needs of National Societies’ COVID-19 emergency response; provides relevant financial and technical support to address direct and secondary impacts of the pandemic, and the well-being of vulnerable and most vulnerable population (WDR 2019).

NATIONAL SOCIETY DEVELOPMENT (NSD) SUPPORT
Anticipation to support (weak) NSs currently at risk of being overwhelmed – we need to support their capacity to survive on short, medium and long term. Also enhance NS auxiliary status and use it to obtain exemption from government to accelerate procurement process.

PROPORTIONALITY ANALYSIS
Understanding the needs in fragile settings should serve to define the proportionality of our actions in terms of funding allocation and actions; for example, in high population density informal settlements where highest levels of vulnerability will increase, and contexts with the most limited health system capacity to detect and respond to COVID-19 cases and maintain essential health services during an outbreak.

STRONG RISK MANAGEMENT
Through close monitoring at local, country, regional and global level and rapid corrective actions as important element for the scale up to succeed.

Note: These Key Terms come from the guiding principles for allocation from IFRC Secretariat’s Mobile, Execute and Transform with agility to respond to COVID-19 document.

**PPE:** “We need PPEs. As the Government will open up the economy progressively, this will bring a second wave and we will need additional PPEs. Considering the expected needs, our current supply will not be sufficient.”
- NS respondent from Americas.

**Immediate funding:** “Our main need has been financial resources. This pandemic came as a big emergency; hence we were not in a position to respond to the situation adequately”.
- NS respondent from Africa.

**Capacity building:** “We need strong technical capacities in all new areas including Contact Tracing, Risk Communication and PMER. COVID has brought many new areas for National Societies to develop expertise in.”
- NS respondent from Europe.

*All top 3 NS needs were ranked based on weighted scoring prioritization. This method uses numerical scoring to rank needs based on a respondent’s order of preferences, with the first mention scoring the highest score of 1, second mention scoring middle score of 0.66 and third mention the lowest score of 0.33. Final ranking is then based on cumulative sum of scores. Total number of needs (categories) – 22.
Top 3 NS needs by region

**Africa**
- Immediate Funding: 4.0
- Tech Capacity - PMER/IM: 3.0
- CEA/RCCE: 2.7

**Americas**
- PPE: 9.3
- Financial sustainability: 8.6
- Volunteer protection and support: 5.6

**Asia-Pacific**
- Tech Capacity - Health/PSS: 7.6
- Capacity building: 5.7
- PPE: 4.3

**Europe**
- Immediate Funding: 16.0
- PPE: 14.3
- Capacity building: 12.9

**Geneva**
- Capacity building: 4.0
- PPE: 3.0
- NSD support: 3.0

**MENA**
- PPE: 3.7
- Capacity building: 2.7
- Immediate Funding: 2.0

1. National Society Needs: Did the IFRC secretariat respond to these identified needs?

- **Recipient NS**
  - Yes: 9
  - Partially: 20
  - No: 1

- **Donor NS**
  - Yes: 3
  - Partially: 14
  - No: 1

- **IFRC**
  - Yes: 5
  - Partially: 38
  - No: 1

Note: 4 respondents chose not to respond to this question.

17 said Yes
72 said Partially
2 said No
The IFRC secretariat responded based on its capacity in country and the capacity of regional offices to respond to the requests of more than 100 NS responding domestically.

For sending money quickly and establishing local partnerships/flexible processes, we have not been able to adopt the current system yet through our normal ways of working.

Massive efforts done by the Regional Office to ensure Cluster Offices were in contact with the NS. There was strong technical guidance in allocating the resources and in coordination with clusters to develop response plans. A bit challenging for some countries but focal persons for COVID response were quite helpful in consolidating the plans.

Immediately the IFRC secretariat responded to the needs. Although there is a high-level plan, they respected the localized plan to align to the 4 pillars: surveillance, support to authorities, community action and business continuity.

We are collecting a lot of information and the NSs are tired and confused with so many requests. The priority of NSs are to have funds to respond and survive.

The IFRC secretariat is doing its best, but in case there is no funding, then it is unable to support.

Yes. The resources of appeal have been properly allocated to the NS response plan, and the technical support provided has been relevant.

A Donor NS contributed 28 millions of unamarked money to the Geneva secretariat. The impact of the pandemic is so big, for example, a lot of the funds go to Geneva, but how much funds go to MENA - we don’t know.

Absolutely, the appeal/EPoA approved all of these items which were included and we received the support.

No, the IFRC secretariat has not responded to these needs. It is the NS that has the lead for disinfection activities and burials at the Ministry level. All our visibility will be ruined if we cannot follow up on these activities and maintain the system. For example, at the beginning of the school year the disinfectant and hand washing system needed to be put in place by the NS. The delay in the IFRC secretariat transfers meant that we could not move forward.
**II. Prioritization of Funding (Recipient NS) - Challenges & successes**

**Communication and Coordination**
- Transparent and clear.
- Good coordination with Country Office and certain IFRC Regional Offices.
- Efficient communication with Government, public, and donors, and logistics crucial.

**Needs based**
- Prioritization of funding does not meet all local needs.
- Important to also take into account National Society local context and include migrants in funding allocation.

**Demand and expectations**
- Political context of a country can affect IFRC secretariat’s support to National Societies in view of their auxiliary role.
- Misunderstanding to decide the priorities at the beginning of the pandemic.

**Decision making**
- There are many examples of successful efforts in resource mobilization from Recipient National Societies.

**Domestic Response**
- Good Communications: Important to disseminate correct information during COVID-19.
- National Societies expected hospital and medical care from the very beginning.

**Flexible Funding**
- A more consultative and participatory process on funding is needed between the National Society and the IFRC Country Office.

**Evidence-based and risk-informed**
- National Societies got funding through production of masks which also helped in distribution of masks to local communities.

**Do you have any feedback to share on the prioritization of funding for identified needs for COVID-19?**
- The funds provided versus the budget was not enough. There is a need for IFRC secretariat to provide more support.
- Procurement of face masks to target population and RCRC staff and volunteers should be given high priority as it is the most effective way of preventing the spread of COVID-19.

**National Societies**
- National Societies are not clear on how funding is being prioritized and allocated from the IFRC secretariat amongst the National Societies in a region.
- National Societies expect additional funding.
- National Societies need more resources for support units such as HR and Finance to have long-term solutions, to support communities in addressing the secondary effects of the pandemic.

**IFRC secretariat**
- IFRC secretariat funding did cover the needs of some National Societies.
- Allocations were done according to IFRC secretariat’s Emergency Plan of Action.

**Some National Societies**
- Some NS funding needs are still not covered.
- Some National Societies keep reserve funds for emergencies.
- IFRC secretariat in country has supported in-country needs well.
- Certain National Societies have engaged corporate donors and have received flexible funding.

**Funding prioritization process**
- There is a need for more flexibility in the use of resources by the National Society. The operation is evolving and new needs are being identified, and flexibility in the use of resources is needed.

**Some examples of successful efforts in resource mobilization from Recipient National Societies.**

- National Societies prioritized hospital and medical care from the very beginning.

- National Societies got funding through production of masks which also helped in distribution of masks to local communities.

- The funds provided versus the budget was not enough. There is a need for IFRC secretariat to provide more support.

- Procurement of face masks to target population and RCRC staff and volunteers should be given high priority as it is the most effective way of preventing the spread of COVID-19.

The National Society's budget initially focused on Information, Education and Communication. Therefore, there was no funding left for livelihoods.
II. Prioritization of Funding (Donor NS) - Challenges & successes

Confusion on where to allocate funds as some countries have two plans (one IFRC secretariat and one National Society) instead of a joint plan. More clarity is needed.

Communication and Coordination

More information is needed on how to support and prioritize funds according to the context and the plan.

Needs based

Mental Health and Psychosocial Support is a priority (some National Societies already have this capacity). Important to consider NS profile when prioritizing funding.

Funding process

Generally the funding process is quite transparent, and the written operational updates are quite clear and well done.

Flexible Funding

Difficult to get timely and complete information on the funding gaps, in particular, on the planning for resource mobilization with the back donors. Long delays in processing pledges is affecting relationships with back donors.

Demand and expectations

Each National Society has different needs. The system should focus on equality versus equity. This is mainly due to the fact that there are strong and weak National Societies. There should be a balance between the two type of National Societies.

Do you have any feedback to share on the prioritization of funding for identified needs for COVID-19?

Uncertainty on why some countries are prioritized in the response.

IFRC secretariat in Geneva has too much of a global view and not enough of a local perspective.

Proposal of a joint Movement plan (for example, similar to the one in Myanmar) could be considered in challenging country contexts.

It is assumed by Donor National Societies that the IFRC secretariat has done due diligence to prioritize funding.

There is a need to communicate decisions to all National Societies to avoid doubts in the funding process.

National Societies were not clear on when they were to expect the funding and/or on the type of funding they were to receive.

The logic behind IFRC secretariat’s prioritization of funding was good, but what was needed is a greater transparency on how it was developed based on funding levels across regions.

Donor National Societies follow the National Society’s plan but the revisions are not up to date with the evolving situation. Bilaterally, the partners are covering the gaps to implement the planned activities, i.e. the procurement of PPEs locally.

Engagement with the IFRC secretariat was straightforward when mobilizing resources.

Generally the funding process is quite transparent, and the written operational updates are quite clear and well done.

Engagement with the IFRC secretariat was straightforward when mobilizing resources.

The logic behind IFRC secretariat’s prioritization of funding was good, but what was needed is a greater transparency on how it was developed based on funding levels across regions.

Confusion on where to allocate funds as some countries have two plans (one IFRC secretariat and one National Society) instead of a joint plan. More clarity is needed.
II. Prioritization of Funding (IFRC secretariat) – Challenges & successes

**Demand and expectations**
- Funds were delivered quickly, but implementation depends on the capacity of National Societies.
- IFRC secretariat processes should be adapted to match the urgency to spend, and if funds were delivered quickly, the implementation will depend on the capacity of National Societies.

**NS absorption capacity**
- National Societies need sufficient time to implement the funds.

**Proportionality analysis**
- Reflection on whether a wrong formula/approach was taken in distributing unearmarked funds to the regions. The IFRC secretariat should identify the needs, analyze, understand the story/context behind the numbers, rather than focusing on just the count.

**Flexible Funding**
- Resources have been given to cover basic needs prioritized by the National Society and based on IFRC secretariat’s experience with them.
- Flexible Reporting
  - An algorithm was developed employing 36 variables to facilitate the financial reporting process. Trusted tool by management.
  - Coordination between the National Society and the IFRC secretariat needs improvement. Longer deadline for feedback on the plans is needed to ensure that the IFRC secretariat’s response is aligned with urgent National Society needs.

**Do you have any feedback to share on the prioritization of funding for identified needs for COVID-19?**

- The funding allocation has not always been aligned with the number of cases - it has been difficult. There is no clear method. It is a "first come first serve," based on finalized National Society response plans.
- Certain regions did not benefit from the allocations of unearmarked funding, and therefore there have been no discussions at the country level on how to allocate such funding by sector/activity.
- The IFRC secretariat has managed to raise substantial amount of unearmarked funding to date.
- The index designed to support decisions was helpful, but only used for the 3rd allocation. This index is still subjective; it needs to be more needs-based.

**Allocation tools in certain regions have been transparent and fair. For example, based on the number of cases and requests.**

- The main contribution of big donors also came with a tight level of earmarking and the name of countries.
- Some National Societies are not requesting additional funds.
- The low level of engagement between the IFRC secretariat and some regional offices in the allocation of funding.

**Flexible**
- Scale up systems so they work faster. Finance processes should be updated to make them more agile and checks and balances should be reduced to speed up the response and get money to the National Society at the beginning of the operation.

**Proportionality**
- The index designed to support decisions was helpful, but only used for the 3rd allocation. This index is still subjective; it needs to be more needs-based.

**NSD Support**
- National Society health capacity mapping is needed.
- Some National Societies will have trouble implementing funds due to structure and capacity limitations.
- Strengthen National Society infrastructure at branch level and insure all volunteers at the forefront.
II. Earmarking of Funding (Recipient NS) - Challenges & successes

Demand and expectations
- Certain National Societies need more streamlined fundraising processes and negotiations with donors so that they can receive funds faster.
- Certain National Societies adapted their model to the IFRC secretariat model of funding, although initially it was not easy.

Coordination
- Great spirit of collaboration between the IFRC secretariat and the National Society.

Domestic response
- Certain National Societies sometimes raise funds without considering their capacity to implement the agreed projects.
- The IFRC secretariat has served as a link to connect National Societies with bilateral donors to complement resources received from Movement partners. It has also supported by offering technical support in resource mobilization.

Timeliness of support
- Delayed transfer of funds to National Societies affected their early response.
- Rapid needs assessment enabled National Societies to mobilize funding from donors.

Flexible Funding
- Earmarking was fairly done. However, other methods could have been used to complement the analysis, like looking at risk factors in the country.
- Minimum earmarking guidelines set at 100,000 CHF do not consider the needs of small countries where a request can be under CHF 100K, for example, the Pacific Islands and the Caribbean countries.

Needs based
- Certain allocations of funding at the country level did take into account National Society response plans.
- There is a need to include not only the procurement but also the operational costs in the funding allocations such as human resources, transportation, IT equipment, support services, capacity building, etc..

Do you have any feedback to share on the earmarking of funding for identified needs for COVID-19?

NSD Support
- National Society capacity building should be factored in when earmarking.
- Some National Societies expressed the need for strengthening PMER and assessment capacities.

IFRC secretariat showed flexibility in relation to the earmarking. The main challenge faced by the National Society was with the delay in the procurement of the PPEs and the fact that the National Society could not undertake the procurement locally.
II. Earmarking of Funding (Donor NS) - Challenges & successes

Coordination

It was not clear to Donor National Societies how the funds were divided across the regions.

There is a need to stop having silo approaches on the funding allocation. A multi-hazard approach is needed that can include all hazards.

NSD Support

There is an opportunity to harness expertise of strong National Societies to support less resourced National Societies.

Flexible Funding

Donors should provide unearmarked funding to the IFRC secretariat at the beginning of appeals such as the one for COVID-19.

Flexible Reporting

The reporting system needs more clarity and should be according to the National Society capacity as well. Donor National Societies sometimes coerced to be in the middle between the Geneva secretariat (who decided on the reporting frequency) and the IFRC Country Office (who communicated what can be expected from the National Society.)

Demand and expectations

The communication between IFRC secretariat and Donor National Societies worked well in promoting the auxiliary role of the National Society and funding the IFRC secretariat.

Donor National Societies have supported small pockets of appeals to countries that were not included in the global IFRC secretariat's appeal.

Donor National Societies are forced to explain to back donors on funding transfer delays due to the IFRC secretariat's internal issues.

Current earmarking guidelines (less than 100k) creates difficulties to process and to accept funds from bilateral engagements and can lead to missed opportunities. It also affects relationship with donors.

Donor National Societies earmarked funds based on their international strategy.

Overall, there was intention to provide unearmarked funding.

The credibility of the IFRC secretariat is very high and it encourages unearmarked funding. However, it is important to make all the partners aware of the regional/country funding allocation, especially in complex contexts with multiple crises.

There is a need to focus on long-term plans for the response in addition to the short-term response.

Strong risk management

No concrete feedback on earmarking from the back donors could be made available beyond 2020.

Donor National Societies have supported small pockets of appeals to countries that were not included in the global IFRC secretariat's appeal.

Overall, there was intention to provide unearmarked funding.

The credibility of the IFRC secretariat is very high and it encourages unearmarked funding. However, it is important to make all the partners aware of the regional/country funding allocation, especially in complex contexts with multiple crises.
II. Earmarking of Funding (IFRC secretariat) – Challenges & successes

The level of earmarking is not the main issue, but rather the issue of how earmarking and pledges are managed, and how they are communicated within the IFRC secretariat to ensure implementation and spending of the funds according to the earmarking.

Communication and Coordination

Initially, allocations were not based on needs, and each region received CHF 30 million.

Domestic Response

The IFRC secretariat supported some National Societies with bilateral negotiations with large donors such as multinational companies to channel grants to the operation.

Needs based

The IFRC secretariat did not know National Society needs at the beginning of the pandemic.

Demand and expectations

The IFRC secretariat has not learned to say "no" to donors (including Donor National Societies). Donor demands are overloading some National Societies.

Internal guidance for earmarking created in certain regions, for example, Asia Pacific.

Do you have any feedback to share on the earmarking of funding for identified needs for COVID-19?

There is need to prioritize funds to insure all volunteers involved in the operation.

NSD Support

Need to strengthen IFRC Country Office/Cluster structures.

There is a lot of focus on the operation forgetting the need to support National Society Development.

Flexibility Funding

The level of earmarking was flexible depending on the National Society capacity and accountability. It was based on what was relevant to them.

Push factors that relate to donor-driven earmarking are sometimes unavoidable, but they lead to unsustainable situations.

Increasing the level of earmarking as the operation progresses contradicts the World Humanitarian summit in terms of increasing unearmarked funding.

Initial allocations from the Geneva secretariat to the regions were not earmarked which worked well.

Earmarking guidelines do not take into account the needs of small countries where a request can be under CHF 100K, especially the Pacific Islands and small states.

Earmarking does not exactly correlate to needs. Needs (situation and scope) change over time. Business continuity plan was not supported by the earmarked funds.

Increasing the level of earmarking as the operation progresses contradicts the World Humanitarian summit in terms of increasing uneararked funding.

Initial allocations from the Geneva secretariat to the regions were not earmarked which worked well.

Earmarking guidelines do not take into account the needs of small countries where a request can be under CHF 100K, especially the Pacific Islands and small states.

Sustainability

More fundraising needed for longer-term needs.

Increase donor awareness on importance of funding for National Society capacity building and sustainability.

There is a lot of focus on the operation forgetting the need to support National Society Development.

Need to strengthen IFRC Country Office/Cluster structures.
II. Prioritization and Earmarking of Funding – Recommendations

**RECIPIENT NS (RNS)**

**Flexible Funding**

- Speed up the funding allocation process (between the request and the disbursement of funds) and make it more flexible.

- Funds allocation should focus on the 3 priority needs for National Societies.

**NSD Support**

- Strengthen National Society technical areas like HR, Finance and PMER to ensure sustained response to the pandemic.

- Strengthen National Society capacity in the sustainability of RCRC services and of the National Society itself.

**Communication and Coordination**

- Strengthen the communication line between IFRC secretariat’s Regional Delegations and Geneva secretariat.

**Demand and Expectations**

- National Societies need more assistance to cover staffing expenses for COVID-19 because operations are 100% volunteer-based

**DONOR NS (DNS)**

**Flexible Funding**

- Need to reduce bureaucratic processes in funding allocation.

- Focus to allocate funds based on needs and the capacity of National Societies.

**NSD Support**

- Harness the expertise of stronger National Societies to build the capacity of less resourced National Societies.

- Strengthen National Society capacity in assessing needs and PMER.

**Communication and Coordination**

- Need to include a feedback mechanism in the development of IFRC secretariat’s Emergency Appeal.

**IFRC secretariat**

- Improve the process of disbursing funds to National Societies to meet the urgency.

- Funding allocation should be based on local needs.

- Strengthen the National Society infrastructure at the branch level.

- Ensure all volunteers are insured especially the ones on the forefront.

- Ensure clarity in decision making and communication to partners.

- A lot of National Societies are facing multiple disasters at the same time and should be taken into account, hence there should be a coordinated response.
"Flexibility is very important at the donors and back-donors level."

"Prioritization of funding is linked to the country-level prioritization rather than thematic. Country-level prioritization seems to work OK as long as needs are met. However, thematic prioritization can disrupt National Societies’ priorities. Speed of transferring funds is important to consider when prioritizing, as if we transfer funds to locations where it does not get there in time the earmarking may no longer be relevant by the time the funds arrive."

"It has been a bit of a “first come first serve” because it has been based on the National Societies that have finished their response plans."

“We are ready now to respond to other pandemics. It was a good learning for us.”

“It is about the internal dynamics of the NS in a good integrity status.”

"I feel uncomfortable that we have such a big chunk of money going to a country that is very sustainable and has raised so much funds."

"Wide consultation with National Societies should at least provide a clue to the IFRC secretariat on what should be considered as a priority for the National Society."

"The urgency to spend has not been matched by the urgency to change the IFRC secretariat’s processes."

"It is important to know the National Society absorption capacity to implement the activities."

"Our National Society keeps reserve funds for emergencies. In this case, we successfully responded in the beginning from these reserves. It was good to be able to respond from our own resources, we felt very proud. The National Society had to mobilize its own funds to respond quickly."

"Frankly, I am proud of our National Society, because I think no other organization responded so quickly with PPE..."
II. Earmarking of Funding - Quotes

As far as I know there was a level of flexibility depending on the National Society capacity and accountability to agree on where they want to focus for each of the components. It was not tightly earmarked, there was flexibility to see what was relevant to the National Society.

Earmarking: It is close, but not a clear match. We did not do the correlation exercise carefully.

Donor-driven earmarking of pledges is sometimes unavoidable. Although we try our best to avoid them. One of the earmarking eligibility is by geographic, one area that we’ve tried to combat, while the other earmarking is timeframe. We had a problem with one Donor National Society’s money which was timeframe earmarked – a big push for us to spend (as much possible) in the first six months, in a way that probably led to the unsustainable situation we’re in now.

Earmarking has pros and cons. The good part is it triggers the receiving country – to spent and implement these activities by a certain time. But at the same time, it may lead to a situation where quality is compromised in order to complete things earlier.

We need to strengthen our cooperation with WHO at a practical level, and make sure WHO understands how it can engage with the IFRC secretariat and National Societies. For them to look at us as a first to contact about some sectoral areas (PSS, risk comms ...) Now we are initiating contact, and we are trying to make sure they do not forget us. We need to think on all levels, how we can formulate our relationship better with them - we need to do better.

The IFRC secretariat would need to increase the flexibility and have better balance between fundraising and building the partnerships.

At the moment we don’t treat all the countries equally because we can’t allocate the money, because of different reasons.
### III. Factors to consider for Funding Allocation

What factors should be taken into account when considering COVID-19 funding allocation to National Societies?

---

*For Recipient NS, Donor NS and IFRC Secretariat factors, there are six factors displayed (instead of five) as they are having the same number of mention by respondents.

**Responses under this include Mandate given by the Government of the country on what the role allocated to the RC in the response, NS capacity to recover and implement, capacities/expertise of NS, Fundraising capacity as well as proven track record with the NS.
III. Factors to consider for Funding Allocation

Combined Overview

How to read this diagram (spider web):
The further towards the edge of the spoke a point reaches, the higher the quantity.

- RNS-overall
- DNS-overall
- IFRC Secretariat-overall
III. Factors to consider for Funding Allocation

Donor NS - Regional Perspective*

In all five regions, NEEDS-BASED FUNDING and NS PROFILE have been cited by Donor NS as being among the important factors to consider in their decision making.

Donor requires information about the needs and preference of affected people/NSs. Allocations need to be driven by actual needs and items that can be accounted among others. As for NS profile, such information provides insight to Mandate given by the Government of the country on what the role allocated to the RC in the response, NS capacity to recover and implement, capacities/expertise of National Societies as well as proven track record with the NS - to know that they have a close contact with the people, and that they know the needs.

*Note: Based on Donor NS view for a particular region. The Donor NS may/may not be coming from the same region.
III. Factors to consider for Funding Allocation

**IFRC Secretariat – Level Perspective**

**ANALYSIS**

In all three different levels of IFRC Secretariat, **NEEDS-BASED FUNDING, ABSORPTION CAPACITY, ACCOUNTABILITY & TRANSPARENCY, NS PROFILE** and **PROGRAMMING** have been cited as being among the important factors to consider in their decision making. **IFRC Geneva HQ** allocates earmarked & un-eararked funds to **IFRC Regional Offices**, which in turn channel those funds to **COs or CCSTs** (who then transfer the money to **NS**)

Collectively, IFRC secretariat respondents are saying that allocations need to be driven by actual needs (as opposed to politically driven, etc.), aligned with local priorities, demand driven, based on intensity of needs, based on sound decision/criteria as well as prioritizing small countries with less capacities and at higher risk. In the process, some level of flexibility is warranted i.e. flexibility in money transfer especially in multi-disaster context to address needs, flexibility of funding use - extent to which the allocation can consider the capacity building needs, etc.

The absorption capacity - National Societies' ability to absorb the funds, willingness and ability to scale up - is also of paramount consideration. When it comes to Accountability and Transparency, funds allocation should be considered for NS that has the ability to conform with rules and procedures of IFRC - audit system, financial management, etc. - staying true to their mandate in country, have capacity to report and also taking into account issues of corruption or frauds. As for NS profile, such information provides insight to Mandate given by the Government of the country on what the role allocated to the RC in the response. NS capacity to recover and implement, capacities/expertise of National Societies as well as proven track record with the NS - to know that they have a close contact with the people, and that they know the needs. On top of these factors, good and quality programming should also be in place: good plans, alignment with global decisions, take into account strengthening NS capacities, feasible/appropriate type of programmes – a high cost programme (running a hospital) vs a lesser cost programme (volunteer-based work).

*Note: The views are based on IFRC levels. It is not possible to do a regional perspective for IFRC i.e IFRC MENA, IFRC Americas, IFRC Europe, IFRC Africa & IFRC Asia Pacific, due to limited respondents from COs & CCSTs.
III. Factors to consider for Funding Allocation

Recipient NS - Regional Perspective*

**ANALYSIS**

In all five regions, NEEDS-BASED FUNDING, NS PROFILE, LOCAL CONTEXT and ACCOUNTABILITY AND TRANSPARENCY have been cited by Recipient NSs as being among the important factors for donors/IFRC Secretariat to consider when allocating funds. Should take into account activities that are realistic and based on current context and situation, based on sound needs assessment and also tailored assistance. Allocation criteria should be context specific, it should not be standard criteria for all NSs. Local context of country should be considered including its health system capacity, pre-existing context, govt programmes as well as their partners/humanitarian actors presence and support. As for Accountability and Transparency, ability to report following IFRC requirement should be considered. On the same note, recipient NS are also requesting for funds allocation to be transparent and clear based on fair treatment.

*Note: Based on Recipient NS view coming from a particular region.
### III. Factors to consider for Funding Allocation - Quotes (top 5 Global Factors)

#### 1. NEEDS BASED FUNDING

"Is there a calculus with which we are aiming to reach where we say X amount of money is going towards beneficiary-centred activities versus how much money is being used to stand up these operations. You can never have enough resources and it’s trying to find that balance."

"We tend to give more funds to countries with high needs and high capacities. But these countries also have a high fundraising capacity. It is not logical to invest so much in those countries."

"Impartiality in this COVID operation would mean allowing the Geneva secretariat and regions to distribute resources according to needs. In several cases, regions made decisions based on politics and not on needs."

"Some of the National Societies ask for huge amount of funds based on weak and exaggerated needs assessment and not real needs, that affect the other National Societies in that same region."

#### 2. NATIONAL SOCIETY PROFILE

"Allocation criteria should be context specific - it will be not be a standard criteria for all National Societies. We need to see what is the National Society’s mandate/common role, then act accordingly."

"Does the National Society have the requisite structure in their place to implement what is in their plan? How can we as the IFRC secretariat support the National Societies to evolve and respond to needs and to support national authorities."

"Considering funding will always be limited and we need to respond globally. Will look more on needs/vulnerability and historical ability."

"Secondly, the resources the National Society has, donors need to consider the funding opportunities of the National Societies in their domestic context. E.g. our National Society has no local funding opportunities from the Government or other sources."

"There is not a proper/fair allocation of funding, and the IFRC secretariat should be transparent and clear on the way of allocation, some of the National Societies get big amounts and other didn't get sufficient funds."

#### 3. ACCOUNTABILITY AND TRANSPARENCY

"...even though with exceptions for COVID response - what level of monitoring and capacity mapping for the National Society? ... really hard to know what is actually on the ground. How do we verify? Do we have enough transparency?"

"How funds have already been spent, accountability or corruption issues, reporting capabilities..."

"Accountability and transparency, audit system, financial management. How the National Society is seen within the society of the country in terms of trust."

"There is not a proper/fair allocation of funding, and the IFRC secretariat should be transparent and clear on the way of allocation, some of the National Societies get big amounts and other didn't get sufficient funds."

#### 4. ABSORPTION CAPACITY

"Need a bit of analysis on how National Societies absorb and implement quality programming. In some countries that we’ve been following, feel this would be problematic."

"On the other hand, there’re pull factors, that relate to humanitarian needs, National Societies’ ability to absorb the funds, willingness and ability to scale up and to do so in an accountable way."

"National Society capacity to implement. Different regions are applying different approaches in this because we don’t have a method to measure or score the implementation capacities of National Societies. The regions have developed their own method of measuring the implementation capacities of the National Society. In this regard there is a little bit of blurriness."

"Earmarked funding should be properly handled. Prior to the confirmation of receiving an earmarked donation, the IFRC secretariat should confirm with the earmarked National Society about their capability and intention to receive the donation."

#### 5. LOCAL CONTEXT

"...the situation on the ground. If National Societies are stretched and the IFRC secretariat is stretched, in some ways we need to ask whether they are able to implement? E.g. (in one country in Asia Pacific)...At this moment, IFRC delegates cannot go to the field. National Society staff cannot have face to face meetings with the IFRC secretariat."

"Pre-existing context needs to be considered to avoid reputational risks during implementation period or beyond."

"Consider local context in a country. If the health system is not managing, we need to reach out even if the National Society is not reaching out to us."

"Covid has different implications in (country). The IFRC secretariat needs to focus more on what the (National Society) is doing and not on what the global trend is in dealing with Covid."
IV. Overall Recommendations from Interviewed Stakeholders - Top 5 topics globally

1. NSD Support
   - Support for financial sustainability, business continuity and income-generating activities
   - Improving the wellbeing of volunteers
   - Strengthening National Societies’ capacities in technical areas (including livelihoods, PMER, Comms)
   - Adaptation to remote work and online trainings
   - National Societies learn from each other (peer support between National Societies)

2. Needs based
   - Allocations need to be driven by needs, not by the National Society’s capacity to spend
   - Strengthening National Society consultation process
   - Flexibility and agility to changing needs
   - Focus on what National Societies need to be sustainable
   - Earmarking must be aligned with needs

3. Demands and expectations
   - Managing expectations based on available/expected funding
   - Better engagement with donors to increase buy-in in overall plan and reduce earmarking
   - National Societies need clear and timely guidelines/technical advice
   - Perception that all major decisions have been made in the Geneva secretariat – blur between strategic and operational leadership
   - Additional HR support needed for units/teams that are overwhelmed

4. Evidence-based and risk-informed
   - Reducing bureaucracy so funds can get to the country-level faster
   - Closely monitoring local context, National Society needs and gaps, absorption capacity, socioeconomic impact, etc.
   - Clear criteria and decision-making process for funding allocation
   - Stronger consultation process with National Societies

5. Strong risk management
   - Acknowledging the complexity and dynamic context of the situation and establishing a flexible approach that increases agility
   - Closely monitoring National Society implementation capacity
   - Planning ahead, including for the incorporation of COVID-19 activities into programmes when funding runs out
   - Putting aside funds for unexpected large-scale events

<table>
<thead>
<tr>
<th>1. NSD SUPPORT</th>
<th>2. NEEDS BASED</th>
<th>3. DEMANDS AND EXPECTATIONS</th>
<th>4. EVIDENCE-BASED AND RISK-INFORMED</th>
<th>5. STRONG RISK MANAGEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>If we are going to remain relevant, we need to shift how we operate, from face-to-face to remote working. Any training, guidance and support from the IFRC secretariat would be greatly appreciated.</td>
<td>A consultative process is needed: Listening and considering the needs and aspirations of National Societies instead of imposing on them. Important to keep National Society things in front.</td>
<td>Better analysis of historical data and look at how we allocate funds to resources in the future and for it not to be based on assumptions. Many decisions had been made before consultations took place.</td>
<td>I anticipate funding drying out for COVID-19, so how do we integrate COVID-19 in existing operations? This transitioning process is needed - recommend to start thinking about this. Factoring COVID-19 in our activities, duty of care, programmes...</td>
<td></td>
</tr>
<tr>
<td>We have lots of needs. The Government is requesting many volunteers to complement their response efforts. We need different approach (distance/online trainings) to train our volunteers. We are trying to contextualize IFRC secretariat’s tools and trainings but unable to find the original ones - asking around with other National Societies. Need tech support from the IFRC secretariat for this.</td>
<td>Try to understand the different allocations which are coming from the humanitarian sector. Analyze and avoid duplication of investments and put money where there are more needs (also related to National Society HR so to reduce potential risks).</td>
<td>Better negotiations with donors. So when donors speak to their back donors, they understand that this is not our usual annual funding with the usual terms and conditions. Remind them of the good donorship.</td>
<td>Lack of clear technical guidance has been an issue (from global and regional level). Pandemic preparedness technical adviser at the (regional) level is lacking (position doesn't exist), we don't have it at global level either and this has been an issue. We were not prepared ourselves...</td>
<td></td>
</tr>
<tr>
<td>Need BCP funding support to continue functions during compounding disasters.</td>
<td>Sometimes, funds have been allocated to whoever screams the loudest. It should be based on needs and capacities, but it has not been this way.</td>
<td>COVID-19 is different from other disasters. The rapidly increasing demand for treatment has caused unprecedented pressure on the healthcare system in many countries. Therefore, it is recommended to focus on the most severely-hit areas. The medical services capabilities of National Societies in countries and in regions with severe humanitarian challenges like natural disasters, armed conflicts and immigration have been under great pressure, while COVID-19 has made it more difficult to aid such areas. It is suggested that the funding allocation should be inclined to National Societies of these countries that are in urgent needs.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
More explanation on region-specific trends is on the "Trends by region" slides below. Click on the region's name for the corresponding slide. These are global trends based on stakeholder feedback from all six questions.

<table>
<thead>
<tr>
<th><strong>Overall trends 1/2</strong></th>
</tr>
</thead>
</table>

**Demand and Expectations**
- National Society capacity to absorb and implement funding.

**Evidence-based and risk-informed**
- More reliance on historical data when making decisions for funding prioritization/allocation.
- Look at domestic fundraising efforts as a factor for funding allocation.
- Allocations to be driven by level of the burden, risk level, travel, tourism and capacity of the countries to respond to the pandemic.
- Clear criteria for allocations at global level needed.
- Useful impact/allocation index in the Americas.
- Pre-existing context needs to be considered to avoid reputational risks for the IFRC secretariat and NSs.
- Clear criteria for allocations at global level needed.
- Useful IFRC secretariat tool to decide on NS funding support, but more factors need to be included in analysis.
- More transparency and information sharing needed.
- Look at domestic fundraising efforts as a factor for funding allocation.
- Strengthen NS ability to respond to secondary impacts of the pandemic.
- Good country-level analysis for a long-term response.

**Flexible Funding**
- More donor advocacy and unearmarked/flexible funding needed in a changing C-19 context.
- Clear communication needed on funding implementation.
- Flexible funding needed as the operation evolves and new needs identified.
- A set of criteria needed for earmarking.
- Reduce checks and balances to speed up response.
- Additional funding needed for 2nd wave.
- Managing donor expectations on the global earmarking guidelines.
- Missed opportunities and delays in pledge processing because of earmarking guidelines.
- Earmarking levels affecting funding prioritization/allocation.
- Flexible IFRC secretariat procedures needed for the transfer of funds.
- Flexible donor earmarking in a changing C-19 context.
- Additional resources provided by private donors to meet existing NS gaps.
- Clarity on funding prioritization/allocation procedures needed.
- Flexible funding needed to cover gaps and multi-crisis contexts (ex. Palestine, Lebanon).
- Challenges to transfer funds due to country sanctions.

**Geneva**
- Unclear decision making for the operation.
- Better coordination needed at global level.
- Translation of key documents/webinars.
- More NSD support needed.
- Overwhelming requests to NS.

**Africa**
- NS capacity to implement and scale up.
- Donor NS's expectation for timely information and processing of pledges.
- Demand for timely technical support/guidance.
- Meeting NS funding expectations.

**Americas**
- Clear funding prioritization/allocation procedures needed.
- Flexible funding needed to cover gaps and multi-crisis contexts.
- Additional resources provided by private donors.
- Challenges to transfer funds due to country sanctions.

**Asia Pacific**
- Lack of clarity in the funding process.
- Clear guidelines and/or trainings needed for NS.
- Concerted Movement effort needed during this global pandemic to reduce the level of earmarked funds.

**Europe**
- Strengthen NS ability to respond to secondary impacts of the pandemic.
- Good country-level analysis for a long-term response.
- Flexible IFRC secretariat procedures needed for the transfer of funds.
- Flexible donor earmarking in a changing C-19 context.
- Additional resources provided by private donors to meet existing NS gaps.
- Clarity on funding prioritization/allocation procedures needed.
- Flexible funding needed to cover gaps and multi-crisis contexts (ex. Palestine, Lebanon).
- Challenges to transfer funds due to country sanctions.

**MENA**
- Risk index useful to define risk rating of countries, unless there is earmarked funding.
- Clear criteria for allocations at global level needed.
- Useful impact/allocation index in the Americas.
- Pre-existing context needs to be considered to avoid reputational risks for the IFRC secretariat and NSs.
- Clear criteria for allocations at global level needed.
- Useful IFRC secretariat tool to decide on NS funding support, but more factors need to be included in analysis.
- More transparency and information sharing needed.
- Look at domestic fundraising efforts as a factor for funding allocation.
- Strengthen NS ability to respond to secondary impacts of the pandemic.
- Good country-level analysis for a long-term response.
- Flexible IFRC secretariat procedures needed for the transfer of funds.
- Flexible donor earmarking in a changing C-19 context.
- Additional resources provided by private donors to meet existing NS gaps.
- Clarity on funding prioritization/allocation procedures needed.
- Flexible funding needed to cover gaps and multi-crisis contexts (ex. Palestine, Lebanon).
- Challenges to transfer funds due to country sanctions.
### Overall trends 2/2

<table>
<thead>
<tr>
<th>Region</th>
<th>Funding Prioritization</th>
<th>Needs-based</th>
<th>NSD Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>GENEVA</td>
<td>-Global criteria for funding prioritization needed.</td>
<td>Funding should be based on NS needs and not be influenced by donor earmarking.</td>
<td>Continue to provide technical advice and support to affected National Societies, with a strong focus on those who have limited capacity to absorb and implement the funding.</td>
</tr>
<tr>
<td>AFRICA</td>
<td>-Prioritization should be done with NS.</td>
<td>Absorption capacity should be taken into account, but allocations should be done based on needs first.</td>
<td>NS needs more resources channeled to technical support, well-being of volunteers, PMER, HR and financial sustainability.</td>
</tr>
<tr>
<td>AMERICAS</td>
<td>-Useful index developed in the region but it was only used in the 3rd allocation. It should be more needs-based.</td>
<td>Increase agility and flexibility of the operation to meet NS needs.</td>
<td>Support financial sustainability, business continuity and income-generating activities.</td>
</tr>
<tr>
<td>ASIA PACIFIC</td>
<td>-Not benefiting from unearmarked funding due to assumptions that AP has a lot of resources.</td>
<td>Funding allocations need to be driven by actual needs not politics.</td>
<td>Improve the wellbeing of volunteers.</td>
</tr>
<tr>
<td>EUROPE</td>
<td>-More transparency needed on allocation of unearmarked funding.</td>
<td>Allocation should be context-specific and not a standard criteria for all NS.</td>
<td>Increase support to ongoing NS activities.</td>
</tr>
<tr>
<td>MENA</td>
<td>-Clear funding prioritization criteria needed at global level.</td>
<td>Longer term with less earmarking.</td>
<td>Help NS adapt to remote work and online trainings.</td>
</tr>
</tbody>
</table>

- Allocate funding towards NS needs in NSD and capacity building. 
- Allocations should be longer term with less earmarking.
- Build technical capacities, ex. pandemic preparedness, assessments, PMER and hygiene promotion.
- Support NS financial sustainability.
- Long-term OD impact not evident.

- Varying needs depending upon country context.
- The needs assessment do not always reflect the reality on the ground and the figures are sometimes inflated.
- IFRC secretariat needs to show transparency on regional funding allocations.
- Find alternative ways to support NS in view of sanctions in certain country contexts.
- Support financial sustainability of NS services and its operation.
**Demand and expectations:** Important to take into consideration the National Society capacity to absorb and implement funding. This should be a factor when considering funding prioritization.

**Evidence-based and risk informed:** More reliance on historical data (global data sets and IFRC Secretariat’s non-public data sets) when making decisions for funding prioritization/allocations. Useful to also look at National Societies’ domestic fundraising efforts as this could influence funding allocations in a region.

**Flexible funding:** More efforts need to be placed on obtaining unearmarked or flexible funding to allow the IFRC secretariat to better address NS needs in a changing COVID-19 context. At present, the trend is going opposite towards tighter earmarking. Earmarking levels are playing a heavy factor on how funds are being prioritized for this operation. Increase flexibility in the IFRC Secretariat’s procedures and systems so that in emergency operations like COVID-19, funding can be allocated on time to National Societies to allow them to respond to COVID-19. For all funding, important to ensure there is clear communication within the IFRC secretariat on how these funds should be spent and implemented in the field according to earmarking to ensure organizational and donor accountability. Clear messaging should also be considered to donors to ensure that there is understanding that this is not a “typical” emergency operation, and it may not be possible to apply usual terms and conditions (ex. Reporting).

**Funding prioritization:** A criteria for funding prioritization is needed at the global level which explains how funding is allocated and which aligns with the criteria of other regions. More transparency and information sharing with members within the Movement and donors on how funds have been prioritized in order to increase trust, meet urgent NS needs, avoid duplication of resources and align not only the IFRC secretariat but also Movement objectives for the operation. Also consider levels of transmission in a country and increase efforts to address COVID-19 when levels and risk of transmission are low.

**Needs based:** For an operation like COVID-19, funding should be based on needs of the National Societies, and not be so influenced by donor earmarking.

**NSD Support:** Continue to provide technical advice and support to affected National Societies, with a strong focus on those who have limited capacity to absorb and implement the funding.
**Accountability and Transparency:** Need to consider the capacity of the National Society to spend and report the allocated funds.

**Coordination and Communication:** Ensure clear communication on decisions taken and set reporting requirements early enough at the start of the operation. Reduce bureaucracy so that funds can get to the countries faster.

**Evidence-based and risk-informed:** Need to ensure some level of consistency when allocating funds to the regions. Allocations to be driven by level of the burden, risk level, travel, tourism and capacity of the countries to respond to the pandemic.

**Flexible Funding:** A lot of National Societies are facing multiple disasters at the same time and there is a need to have a coordinated funding response. While National Societies appreciate the IFRC secretariat’s support, initial delays in the release of funds affected the start of the operation. National Societies acknowledge that the funding allocation was fairly done, but indicate that other methods could have been used in determining the allocations, for example, a country’s risks and capacity to respond to the pandemic. IFRC secretariat expresses satisfaction with the level of earmarking flexibility which took into account NS capacity and accountability.

**Needs based:** Funding allocation decisions require a wide consultation with National Societies so that their immediate needs are prioritized. There is a need to continuously negotiate with the donors to make the resource allocation needs driven.

**NSD Support:** National Societies need more resources channeled to technical support, well-being of volunteers, PMER, HR and financial sustainability.
Demands and expectations: Perception that all major decisions for the operation have been made by the global leadership team, blurring strategic vs operational leadership. Better coordination needed at global level, as mixed messages from the Geneva secretariat have created confusion. Webinars and important information from the Geneva secretariat at times have been shared only in English, which has created language barriers. National Societies need stronger support from technical areas to develop their response/recovery plans. Too many requests sent to them, which have not always been coordinated.

Evidence-based and risk-informed: Clear criteria for allocations at the global level is needed. Better efforts to capture the voice of recipient National Societies and to incorporate local context, needs and gaps of the most vulnerable areas in decision making. The impact/allocation index developed in the Americas has been useful and is still a valid tool for future allocations, however, it could be improved. Pre-existing context needs to be considered to avoid reputational risks.

Flexible funding: National Societies have expressed that there is a need for more flexibility in the use of resources as the operation is evolving and new needs identified. Perception that we are going backwards when it comes to earmarking, as some funds are tightly earmarked. There should be a set kind of criteria that helps us analyze whether earmarking makes sense. Check and balances should be reduced to speed up response. National Societies expect additional funding needs due to "second wave" as movement restrictions are reduced in the region.

Funding prioritization: Prioritization must be done in conjunction with National Societies. The index developed in the region to support this decision has been useful, however, it was only used for the 3rd allocation. It needs to be more needs-based, as it is still subjective.

Needs based: Absorption capacity should be taken into account, but allocations should be done based on needs first. Increase agility and flexibility to changing needs. Funding should be prioritized for smaller and weaker National Societies. Perception that we are spending too much on vehicles, equipment, and HeOps. Stronger focus needed on building capacities that can make National Societies more sustainable.

NSD Support: Support financial sustainability, business continuity and income-generating activities. Improving the wellbeing of volunteers. Strengthen National Societies’ capacities in technical areas. Help them adapt to remote work and online trainings. Increase support from the IFRC secretariat to National Societies' ongoing activities, as it has been very limited.

Transfer of funding: Reduce bureaucracy and increase flexibility in procedures in order for funds to reach National Societies more quickly.
Demand and expectations: Important to consider National Societies’ capacity to absorb and implement funding, and its willingness and ability to scale up. Apart from the need for more transparency on the funding allocation and gaps, Donor National Societies expressed difficulty in getting timely and sufficient information, in particular, on funding gaps to plan for resource mobilization with their back donors. Long delays in processing pledges are affecting donor/back donor relations. The IFRC secretariat acknowledges there is demand for effective and timely technical support and guidance from National Societies. The IFRC secretariat is also aware on the mismatch of expectations on funding levels between the Regional Office and Country/Cluster Offices that affect National Societies’ expectations as well.

Evidence-based and risk informed: Caution against reliance on formula approach i.e. number of cases, science-based indexes, size and specialties of a National Society, mandate, geographic, level of impact etc, as the reality is more complex and delicate. This has been useful and valid from a Donor National Society view, but more transparency and information sharing is needed to better understand funding needs and gaps. Nevertheless, the IFRC secretariat realizes that a more practical approach is needed, and more factors should be considered, including political and push factors. Useful to also have an in-depth assessment which will help better decide on funding decisions. It is also useful to look at a National Society’s health system in country, capacity or investment of a country in its health sector, including in countries with severe humanitarian challenges. Also useful to look at domestic fundraising efforts.

Flexible funding: While Donor National Societies acknowledge the (global) earmarking guidelines is a good approach, it’s challenging to convince back donors and manage their expectations. Earmarking guidelines should be more flexible as it has resulted in difficulties to accept and manage funds as well as they do not take into account the needs of small states, where a request can be under CHF 100K. This has led/can lead to missed opportunities as well as delays in pledge processing, affecting relationships with donors/back-donors. Earmarking levels influence how funds are being allocated/prioritized in Asia Pacific with varying needs. Flexibility of funding is also sought.
Funding prioritization: There is a sense that Asia Pacific is missing out on unearmarked fund allocation, due to the assumption that Asia Pacific has a lot of resources. Some countries, not having the privilege of receiving earmarked funds continue to have massive needs, vulnerabilities and its fragile context suffers due to minimal funding. More transparency is needed on how (unearmarked) funds have been prioritized in order to increase trust, meet urgent National Society needs, etc. A clear criteria or formula for funding prioritization is needed at the global level which explains how funding is allocated and which aligns with the criteria of other regions.

Needs based: Allocations need to be driven by actual needs (as opposed to politically driven, etc.), aligned with local priorities, demands, intensity of needs, sound decisions, current context and situation, sound needs assessments as well as with a tailored assistance. Allocation criteria should be context specific and not a standard criteria for all National Societies.

NSD Support: Continue to provide technical advice and support to affected National Societies, with a strong focus on building capacities (strength & expertise), which is among the top 3 needs in Asia Pacific.

Transfer of funding: Flexibility in IFRC secretariat’s procedures and systems, in particular, flexibility in money transfer especially in multi-disaster contexts to address needs.
Demand and expectations: Although some National Societies found their engagement and transfer of funds straightforward, other National Societies reported a lack of clarity regarding the process of accessing funds, and commented on the rigidity of the process. National Societies have requested that clear guidelines and/or training in mobilizing emergency funds is made available, including in the Russian language. They would also like to have clear guidelines when it comes to engaging with WHO and other non-Movement partners, should similar crises happen in the future. At the same time, IFRC Secretariat respondents have acknowledged rigidity in some of their processes and would like to find ways to guarantee that these do not jeopardize the integrity of its humanitarian mandate. For some Donor National Societies, their financial support has been largely determined by specific countries that their respective governments chose to prioritize, and they have highlighted a need for a concerted effort within the Movement to change donor attitudes in the face of a global pandemic.

Evidence-based and risk informed: National Societies have highlighted a need to strengthen their ability to respond to the secondary impacts of the pandemic by building key capacities so that they can properly assess and articulate their needs. For the IFRC secretariat, good country-level analysis is needed in order to move forward with the long-term response.

Flexible funding: A need for more flexible IFRC secretariat procedures regarding the transfer of funds, as well as donor flexibility in their earmarking is needed, especially in an operational context whereby needs can change and additional financial resources be provided by private donors to address a National Society’s existing gaps.

Needs based: National Societies would like some of the COVID-19 allocations to address some of their specific NSD and capacity building needs. IFRC secretariat respondents think allocations should be negotiated over a longer implementation period, and be less detailed in their descriptions /earmarking.

NSD Support: A strong need has been highlighted by National Societies to build technical capacities, especially regarding pandemic preparedness, designing public health interventions, how to carry out assessments, PMER and hygiene promotion. Additionally, the need for financial sustainability has been highlighted by respondents. Some National Societies feel that the IFRC secretariat is not aware of its own challenges in its NSD efforts, as some respondents mentioned that long-term OD impact is not evident, as there is a need for sustained, long-term NSD support.
Accountability and Transparency: The needs assessment do not always reflect the reality on the ground and the figures are sometimes inflated. The IFRC secretariat has to show transparency when it comes to funding allocations amongst the regions.

Coordination and Communication: Communication amongst the Movement partners is essential to avoid any duplication of efforts. One component that we need to strengthen is the communication line between the delegations and the IFRC secretariat.

Demand and expectation: There is a challenge with certain National Societies implementing activities and spending money. This depends on the National Society's capacity to implement.

Domestic Response: Local procurement allow the National Societies to be agile to respond to the crisis.

Evidence-based and risk-informed: From the DCPRR point of view, the risk index defines the overall capacity level in the country, its coverage of the plan and funding projections, unless there is earmarked funding.

Flexible Funding

Funding allocation: National Societies were not aware of the funding allocation in the MENA Region - some National Societies received more than others. In general, the IFRC secretariat showed flexibility in funding for COVID-19. The ownership and connectiveness needs to be improved among the Movement components. A clarity on the allocation, selection and prioritization procedures is needed. Three areas should be defined: 1) Interconnectivity amongst the departments; 2) Working together; and 3) Learning and sustainability of the National Society to maintain and deliver their mandate.

More resources required: The funds received by some National Societies were not fully covered by the response plan since some of the response plans were not updated. Also, some activities, for example, RCCE will be included in the future needs to be covered. Also, some activities, for example, RCCE will be included in the future needs to be covered.

Transparency: The IFRC secretariat should focus on maintaining the accountability of the prioritization process for National Society needs.

Earmarking: Earmarking does not always consider countries with multi-crisis like Lebanon and Palestine.

Earmarking: In addition, during COVID-19, unearmarked funds were preferred because the National Society could procure locally due to travel restrictions. Also, geographical and activity-based earmarking was not accepted as it was too tight of a level of earmarking.

Earmarking: Look into multi-year funding, and ensure that IFRC is not competing with the annual plan funding.
Priority needs: The flexibility to change the earmarking with the evolving situation and changing needs of the targeted communities. It could differ from country to country.

Transfer of funds: Challenges to transfer funds because of the sanctions of certain countries.

Implementation challenge: The main challenge is how to spend the funds and how to fully implement the activities. With the current situation and the movement restrictions, as well as the limited access to the field, implementation rates remains a big challenge.

Lessons Learnt: The response to COVID-19 was a learning experience which allowed the National Society to respond more efficiently to future events and pandemics.

Movement Footprint: There is no picture on the RCRC Movement footprint. There is an ICRC footprint, IFRC secretariat footprint and specific National Society footprints, but the Movement footprint is missing in the MENA region. The footprint will come when tools are aligned as one Movement, there is one direction, and all the Movement components work together.

Needs Based: The needs are different from one country to another. The current evolving situation and changing needs requires a flexible funding approach. Also, funding allocations should include a wider approach to assess needs and not be based solely on a needs assessment. The IFRC secretariat has to show transparency when it comes to the funding allocation amongst the regions.

NSD support: The list of National Society needs and priorities were shared with the IFRC secretariat. It is important to explore alternative ways of supporting the National Society in view of the challenges it faces with sanctions. Also, important to ensure the sustainability of its services and operation; safety of staff and volunteers; and the coverage of costs of responders/distribution.

Proportionality Analysis: Needs should be prioritized. It is unrealistic to implement all planned activities. An area-based approach should be considered, accountable to the stakeholders and the community.
